

Flightgear Management Console (1.0)

Allows you to manage your Flightgear server with a text based GUI - Official support sites: [Official Github Repo](#) - [Official Forum](#)

Edit "fmmc" and change the settings at the top if your Flightgear server is not in /home/flightgear/fgms-0-x.

You will need to run cpan (as root) and install these modules:

- cpan -i UI::Dialog
- cpan -i Term::ReadKey
- cpan -i Term::ANSIScreen

You also need to have my Flightgear Startup Script installed.

I suggest you then add this to your /home/flightgear/.bashrc file: export PATH=/home/flightgear/bin:/home/flightgear/FlightgearManagement:\$PATH

After that you should log out and back in and now "fmmc" should work.
